## PUBLICATIONS

---

### Refereed articles and abstracts

#### **Note on author order:**

My work spans several disciplines but broadly, publication order follows the medical model. The first, second, and senior (last) author positions are reserved for those who guide, fund, perform, write, and conceptualize the bulk of analyses. I have noted places where I am the first, second, or senior author and when a student I have mentored is in one of those positions. Note also that I took parental leave in 2017/2018 and again in 2021/2022 resulting in decreased publications the following years.

*Consortia publications:* in genetic publications, the consortium allows each cohort spots for a primary analyst and a senior author who is typically the PI of the study. The analytic lead for each study would generally be considered a “second” author. I have noted places where I am the analytic lead for a genetic consortium.

#### Pre-prints

##### **Note on preprint servers:**

As open science becomes more prominent, and based in part on the speed of technological advances in genomics, posting preprints on engines such as arXiv, medRxiv, biorXiv is particularly imperative to my work. While these are not formally peer-reviewed, they are indeed open to all scientists and often receive more critical, comprehensive, and diverse commentary and critiques than the traditional submission process. I have removed preprint manuscripts that have been published. All manuscripts I have listed here are simultaneously under review in high impact journals such as the *American Journal of Epidemiology*, *PLoS One*, *Journal for Alzheimer's Disease*, and the *Epigenetics*.
